

Platform Bed Frame Assembly

Step 1. Take all components out of the box and lay them out on the floor.

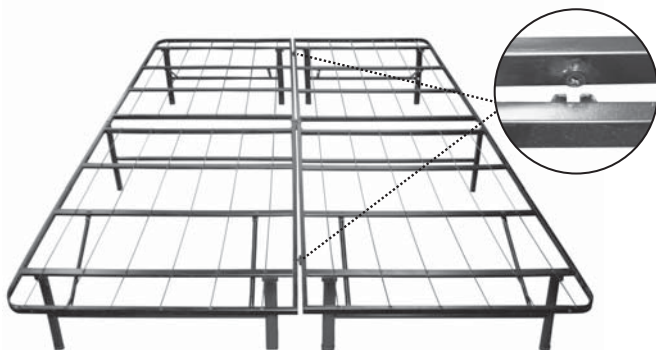

Step 2. Unfold each half and lay flat. Raise all six legs to upright position. Each of the four end legs have separate support arms. Rotate support arms to hook on to the bolts and tighten with installed wing nuts. Note: The two center legs do not require wing nuts.

Step 3. Tighten the wing nut until secure. Repeat the same process for all four end legs, making sure all wing nuts are tightly secured.

Step 4. Flip the base over to stand upright. Follow the same steps to assemble the other base unit.

Step 5. Insert two halves together with keyhole locked in place.

Enjoy your new bed frame!

Note. For twin size there is only one piece.
